

Universal 3½-digit panel instrument

Current- voltage and temperature inputs in the same instrument

Separate zero- and span adjustments

Galvanic isolation between supply and internal electronics

Made in accordance with the CE and EMC regulations

DMP350 is a universal 3½-digit panel instrument with analogue and temperature inputs. The instrument has an adjustable display range between -1999 to +1999. The instrument can be used in connection with all C-mac[®] converters and relays with analogue outputs. In addition to the current, voltage and temperature inputs the instrument is also supplied with a 24 VDC output, for the supply of external sensors or the like.
